V-COMM Appoints Boyle as Engineering Manager for Network Services

Cranbury, NJ
December 10,
1999 –

V-COMM, a leader in telecommunication s engineering, has appointed Robert Boyle as engineering

manager for network services. Boyle's responsibilities include management of V-COMM's network services for the wireless communications industry, government agencies, educational institutions, and the local telephone industry.

Boyle brings to his new position 11 years of network engineering experience and previously held the position of staff engineer for network services at VCOMM where he was responsible for the RF design of PCS (Personal Communications Systems) and cellular systems.

Before joining V-COMM Boyle held several positions at Comcast Cellular Communications including MSC operations supervisor. His achievements include the installation of the protocol translator between Comcast and Cellular One NY and the MTSO relocation from Perth Amboy, NJ to Piscataway, NJ.

Boyle commented on his new position, saying "VCOMM offers a distinct advantage to its clients in networking because we have expertise that covers virtually every situation, including G3 conversions."

"Bob is an engineer and a manager who innately understands the complexities of evolving network demands. We are delighted with his achievements to date and are sure there are many more to come," said Dominic VILLECCO, founder and president of VCOMM.

V-COMM is an engineering firm that provides unparalleled service in telecommunications engineering that is firmly rooted in the realities and challenges of today's business climate. V-COMM's staff of engineers are experienced in personal communications services, cellular, specialized mobile radio, enhanced SMR, paging, wireless data, microwave, fiber optic cable systems and SS-7 signaling and switching networks. V-COMM is based in Cranbury, NJ with a branch office in Warminster, PA.
