

NEW JERSEY TOWNS EMPLOY V-COMM TO IMPROVE EMERGENCY COMMUNICATIONS

CRANBURY, NJ, November 7, 2002 -- V-COMM, a leading telecommunications engineering firm, has entered into agreements with three New Jersey municipalities to provide critical expertise needed to upgrade and enhance police, fire and public works communications systems. The municipalities include Princeton Township in Mercer County and Middle Township and Stone Harbor in Cape May County.

“Over the past year, community safety has become a primary concern for everyone,” said Dominic Villecco, president of V-COMM. “Each of these townships has taken the important first step to thoroughly evaluate their existing network en route to building a state-of-the-art emergency response system.”

V-COMM is playing different, but critical, roles in each municipality. In Princeton and Middle Townships, V-COMM will serve as an independent consultant to provide an objective evaluation of the communications system and use their expertise to supervise vendor selection and implementation of the network upgrade. V-COMM’s task is particularly challenging in Middle Township. As the County Seat, Middle Township is the hub of the Cape May County government and the communication network is the vital link to police, fire and public works services.

In Stone Harbor V-COMM is redesigning and optimizing the police communications system to eliminate coverage issues and improve overall public safety.

V-COMM, a leading provider of integrated network engineering, radio frequency engineering and business services, delivers needed expertise and cost-effective solutions for wired and wireless operators and vendors. Company executives are much sought-after expert witnesses providing testimony on telecommunications issues in local, regional, national and international venues. V-COMM has a growing staff of over 50 engineers and professionals in its Blue Bell, PA and Cranbury, NJ offices. For more information, visit us on the World Wide Web at:
