The Experts Electrical Contractors Rely on for In-Building DAS and Public Safety Communications

V-COMM ensures that your projects meet or exceed local/county codes for in-building emergency radio coverage.

As an electrical contractor, you are responsible for the design and installation of a building's electrical system and making sure it is code compliant.

Sometimes various codes create conflicts. For example, there are mandates for the use of energy-efficient building materials and practices – e.g., Low-E glass, Leadership in Energy and Environmental Design (LEED) construction, etc. – and these materials can block signals needed for required emergency radio coverage for first responders.

With more than 25 years of experience, V-COMM is the perfect partner for electrical contractors to ensure compliance with municipal codes and the proper design, integration, and operation of DAS and public safety radio communications for strong wireless and radio signals throughout the building.

To ensure your next building has superior radio coverage and wireless connectivity to meet building codes, call V-COMM today at 1-800-930-4307 or visit vcomm-eng.com/ecpros.

Why Electrical Contractors Partner with V-COMM

Modern buildings require strong radio signals to power first responder communications. That's why a building's public safety and cellular distributed antenna systems (DAS) are far too important for "off-the-shelf" products.

V-COMM sells solutions, not specific products or vendors. We have access to all products on the market and use the one that works best for your specific application.

Our engineers understand the codes and technical factors involved in DAS, which must meet certain standards for signal strength, audio quality, and coverage to comply with current building codes. As a result, many electrical contractors rely on our proven expertise in DAS design, product selection, and troubleshooting.

New Construction or Renovation? V-COMM is Always the Best Choice:

- **New Construction** – “Build it right” from the beginning when it matters most. New construction projects are increasingly incorporating in-building DAS systems during the design phase. That's why it's important to choose an expert that understands the technology and to make all in-building signals work effectively.
- **Renovation/Restoration** – We have extensive experience in fixing ERRCS and wireless/WiFi issues in older buildings with affordable custom solutions.

Project Management

V-COMM assigns a manager as your key contact who personally oversees your project. Each manager assists your electrical team from inception to completion, keeping everyone informed, including all authorities having jurisdiction (AHJ) that ensure ERRCS code compliance. After the project is completed, you can rely on your V-COMM project manager for continued support and troubleshooting.

To ensure your next building has superior radio coverage and wireless connectivity to meet building codes, call V-COMM today at 1-800-930-4307 or visit vcomm-eng.com/ecpros.
